

Liquid Organic Manure - Growth Stimulant

NATURAL COMPLETE CROP CARE

Growth Stimulant is a combined formula of naturally occurring Humic, Fluvic & Amino compound, making it an efficient organic potassium fertilizer. Humic and Fulvic acids are the final break-down constituent in the natural decay of plant and animal materials. These organic acids are found in pre-historic deposits. Growth Stimulant contains a wealth of micro nutrients and soil conditioners which improves the physical and chemical qualities of the soil. This promotes good soil structure and texture which is conducive for enhancing microbial activities. Growth Stimulant is an excellent plant growth stimulant which improves the soil, promotes good root development, stimulates seed germination, promotes crop growth, improves crop resilience, improves crop quality and protects agricultural ecological environment. Growth Stimulant increases the plant's resistance to unfavorable stress factors such as attacks of peroxide compounds, toxins, and free radicals. It also helps in the synthesis of chlorophyll, sugars, vitamins and amino-acids, which are essential for the plants. It is also a soil activator and soil conditioner, by magnifying the available fertilizer in the soil.

BENEFITS

- 100% Natural, organic, versatile and bio-degradable product
- Improves soil structure thereby enhancing microbial activities
- Enhances the resilience of crops from pest, disease and toppling resistance
- Improves the health of the soil and aids its longevity
- Provides stimulus for beneficial soil micro-organisms
- Reduces drought, heat and cold stress and improve yield stability

Form

Available in liquid & Granules form.

How to Use

Soil Application / Foliar Spray.

Dosage

Apply 5 ml / m² area before planting sowing and during irrigation./ Mix Growth Stimulant Granules with the soil upto top 5-10 cm, around the base of the plant.

Storage

Store in a cool, dry & covered place. Do not store in direct sunlight.
